APPENDIX A

CALCULATIONS

Calculation of Joint Rotation & Eccentricity

Notes

1 Calculations based on TII Document CA/HA/BT/C11/54026/02/O pg 4/3

2 Input by user is in blue text

Ovalisation	d	0.8	mm	
Allowable deflection between 2 sides of tunnel	dall	0.4	mm	
Centroidal Radius	r	5595	mm	
Angle subtended by a segment,	β	56.8	degrees	
Calculations				
a = r + dall	a	5595.4		
b = r - dall	b	5594.6		
Chord length	L	5326		
	p	-0.0003		
	q	11190.8		
	r	-34243454.2		
	χ	3060.2	mm	
Original angle between segment and horiztonal	θ	61.58	degrees	
New angle of the segment to the horizontal	α	61.57	degrees	
Birdsmouthing between two segments	2(θ–α)	**0.009**	degrees	
Joint Rotation of Each Segment	(θ–α)	**0.005**	degrees	
t width at rotation = 0.581 degrees				
Max possible Contact Width		170	mm	
Packing thicknes		2.00	mm	
max strain (elastic)		0.67	mm	
Thickness of compressed packer		0.66	mm	
		0.69	mm	Opening caused by joint rotation ref 4/6A
Contact width	x	8270	mm	High Contact Width relates to very low rotation of joint angle (i.e. low birdsmouthing between two segments)
Min Contact width	x	170	mm	
Length of lining above packing		90	mm	
Lining thickness		350	mm	
Radial Joint Eccentricity	e	**28.3**	**mm**	=Min eccentricity due to linear distribution of load over length of packing

Assessment of Joint Opening due to Longitudinal Curvature of Tunnels

IMPOSED RADIUS OF CURVATURE (R') DUE TO DEVELOPMENT

L	10	m	Distance between points of inflect
δ	0.03	mm	Maximum displacement between points of inflection
$R' = (L/2)^2 / 2\delta$			**R' = Imposed radius of curvature**
R'	416.67	**km**	Imposed radius of curvature due to longitudinal tunnel deflection

CHECK FOR OPENING OF TUNNEL JOINTS

R'	416666667	**mm**
L1	1700.0	**mm**
θ '=L1/R'	4.08E-06	**radians**
Tunnel diameter	1.15E+04	**mm**
L2	1700.047	**=(R'+L1) θ**
Joint Opening	0.05	**mm**

NOTES

1. ALL DIMENSIONS IN MILLIMETRES UNLESS NOTED OTHERWISE.
2. CHARACTERISTIC STRENGTH OF CONCRETE TO BE CLASS 60.
3. MINIMUM PULL-OUT LOAD FOR BOLT/SOCKET TO BE 8 TONNES.
4. ALL MATERIALS USED HAVE BEEN APPROVED IN ACCORDANCE WITH THE SITE BASE QUALITY ASSURANCE PROCEDURES.
5. COVER TO BE 40mm NOMINAL, 35mm MINIMUM.
6. THIS DRAWING TO BE READ IN CONJUNCTION WITH DWG Nos. 41002, 41003, 41004, 41012 & 41013.
7. GRUMMET OR COMPRESSIBLE WASHER TO BE INSERTED WITH BOLTS. GRUMMET/WASHER TYPE TO BE CONFIRMED.
8. BOLT DIMENSIONS TO BE CONFIRMED DEPENDING ON SOCKET DETAILS.
9. GROUT SOCKET AS SHOWN OR SIMILAR APPROVED.
10. MAXIMUM GROUT PRESSURE TO BE 4.6 BAR.
11. OVER 80% OF THE BOLTS REMAINED IN PLACE ONCE RINGS BUILT AND GRANTED.
12. DIMPLES FOR CONSTRUCTION FIXING POINTS APPLICABLE TO ALL SEGMENTS FOR ALL RING TYPES EXCEPT KEY SEGMENTS
13. GROUT TO ACHIEVE CHARACTERISTIC STRENGTH PRIOR TO GANTRY WHEEL TRAVELLING OVER SEGMENT NIB

Title: 10840 I.D. TUNNEL PRECAST CONCRETE LINING DETAILS

Scales: 1/25, 1/10, 1/5, 1/2

Drn: NDA Date: 14/5/01 Chk: Passed

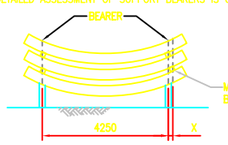
Project No.: 4958 Design Package: HWD 4.3

Drawing No.: DR/HA/BT/C11/41001/09/X

Original Drawing Size : 594 x 841 -- A1

DESIGN ASSUMPTIONS RELATING TO TEMPORARY LOADING CONDITIONS

1. MAXIMUM NUMBER OF SEGMENTS TO BE STACKED/LIFTED IS THREE UNLESS DETAILED ASSESSMENT OF SUPPORT BEARERS IS UNDERTAKEN.



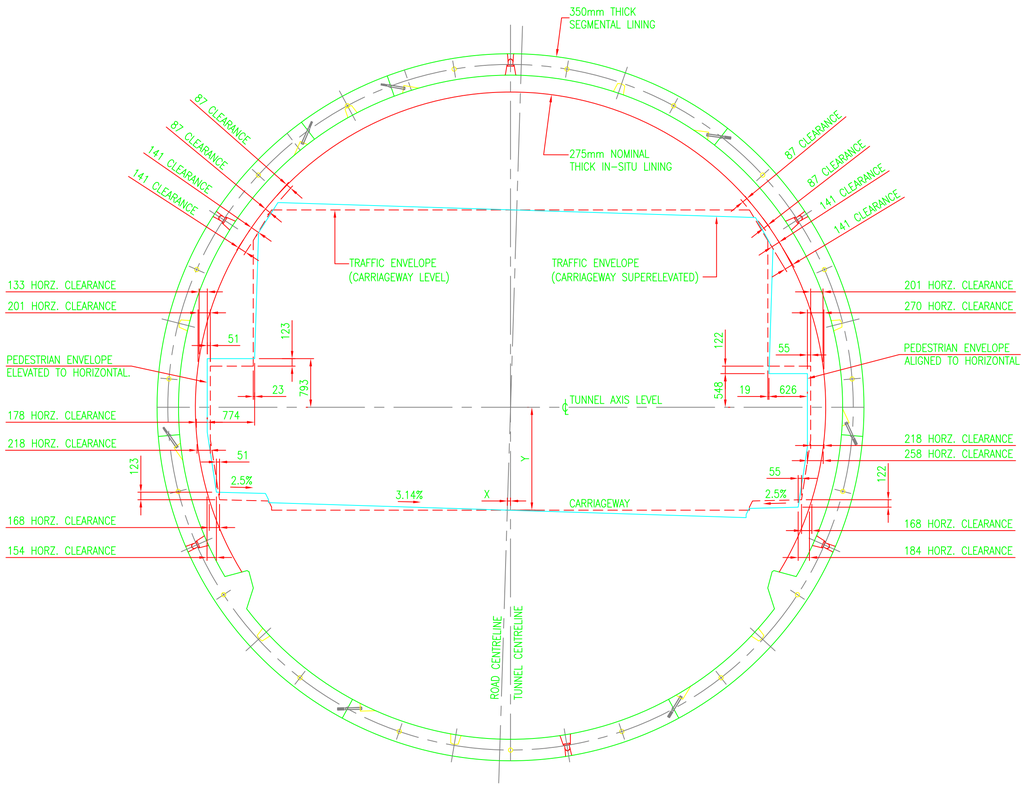
2 No. BEARERS MIN PER SEGMENT AT 4250mm SPACING. BEARERS TO BE MIN 1800mm LONG. 'X' MAXIMUM HORIZONTAL OFFSET IS 150mm. LIFTING POINTS TO MATCH BEARER POSITIONS ON LOWER SEGMENT. ALTERNATIVE ARRANGEMENTS TO BE AGREED BY THE CONTRACTOR'S DESIGNER.

2. MOULDS NOT TO BE STRUCK UNTIL CHARACTERISTIC STRENGTH OF 18N/mm2 IS ATTAINED. LIFTING LUGS ASSUMED TO BE PROVIDED AT QUARTER POINTS ON LEADING/TRAILING EDGES. MANUFACTURERS LIFTING METHOD TO BE AGREED.
3. SEGMENTS NOT TO BE STACKED 3 HIGH UNTIL CHARACTERISTIC STRENGTH OF 25N/mm2 IS ATTAINED.
4. ALL CIRCLE BOLTS TO SEGMENTS ABOVE AXIS LEVEL TO BE INSERTED AND RAM PRESSURE TO BE MAINTAINED ON SEGMENTS PRIOR TO REMOVAL OF ERECTOR PADS. RAM PRESSURE TO BE REMOVED ONLY AFTER COMPLETE RING HAS BEEN BOLTED. ALTERNATIVE SEQUENCE TO BE AGREED BY THE CONTRACTOR'S DESIGNER.
5. PLANE MIS-ALIGNMENT ON CIRCLE JOINT GREATER THAN PACKER THICKNESS MAY RESULT IN DAMAGE TO SEGMENT DURING RAM SHOVE.
6. SHOVE RAM THRUST OF 2655kN OVER 900mm SHOE LENGTH NOT TO BE EXCEEDED. LOADS IN EXCESS OF THIS VALUE MAY RESULT IN DAMAGE TO SEGMENTS.

AS-BUILT

Changes have been made to the 'For Construction' drawing.
This drawing should be read in conjunction with Field Change Request numbers:

FCR/NC/NTS/T04/38315/01/C	Change in segment lifting arrangements



DISPLACEMENT BETWEEN ROAD AND TUNNEL ALIGNMENT TO SUIT ROAD SUPERELEVATION (MAX. SHOWN)

SCALE 1:50

NOTE:

CLEARANCES MAY VARY FROM THEORETICAL DUE TO DRIVING TOLERANCES AND DESIGN REALIGNMENTS. REFER TO WRIGGLE SURVEY IN AS-BUILT RECORDS.

SUPER ELEVATION	HORIZONTAL SHIFT FROM ROAD ALIGNMENT TO TUNNEL AXIS X	VERTICAL SHIFT FROM ROAD ALIGNMENT TO TUNNEL AXIS Y
0.50%	8.40mm	1679.98mm

SCALE 1:50

NOTES

1. NO ALLOWANCE FOR ROAD LAYING TOLERANCE IN SPECIFIED CLEARANCE. HOWEVER TOLERANCE ON ROAD SURFACE LEVEL TO BE ± 6mm FROM DESIGN POSITION IN ACCORDANCE WITH TABLE 7/1 OF VOLUME 1 OF THE NRA SPECIFICATION FOR ROAD WORKS.
2. NO ALLOWANCE FOR ROAD RESURFACING
3. WALKWAYS FALL 2.5% TO HORIZONTAL, TOWARDS THE CARRIAGEWAY, IRRELEVANT OF ROAD SUPER ELEVATION. WALKWAY ENVELOPE ORIENTATED TO HORIZONTAL.
4. THIS DRAWING TO BE READ IN CONJUNCTION WITH DRAWING No DR/HA/BT/C11/41101.
5. TOLERANCE OF POSITION OF INNER LINING TO BE ± 50mm IN ACCORDANCE WITH BTS MODEL SPECIFICATION FOR TUNNELLING (1997) CLAUSE 360.1.
6. MINIMUM STRENGTH OF CONCRETE TO BE 10N/mm^2 PRIOR TO STRIKING SECONDARY LINING SHUTTER.
7. FINISH TO CONCRETE TO BE F3 AS EMPLOYERS REQUIREMENTS VOLUME 3, PART 3, CLAUSE 3.16.6.15, AND COATED AS CLAUSE 3.16.6.16.
8. LINING TO BE COATED WITH CERAMICOAT REFER TO DRAWING No's :- DR/HA/BT/C11/41054,41056,41061,41063.

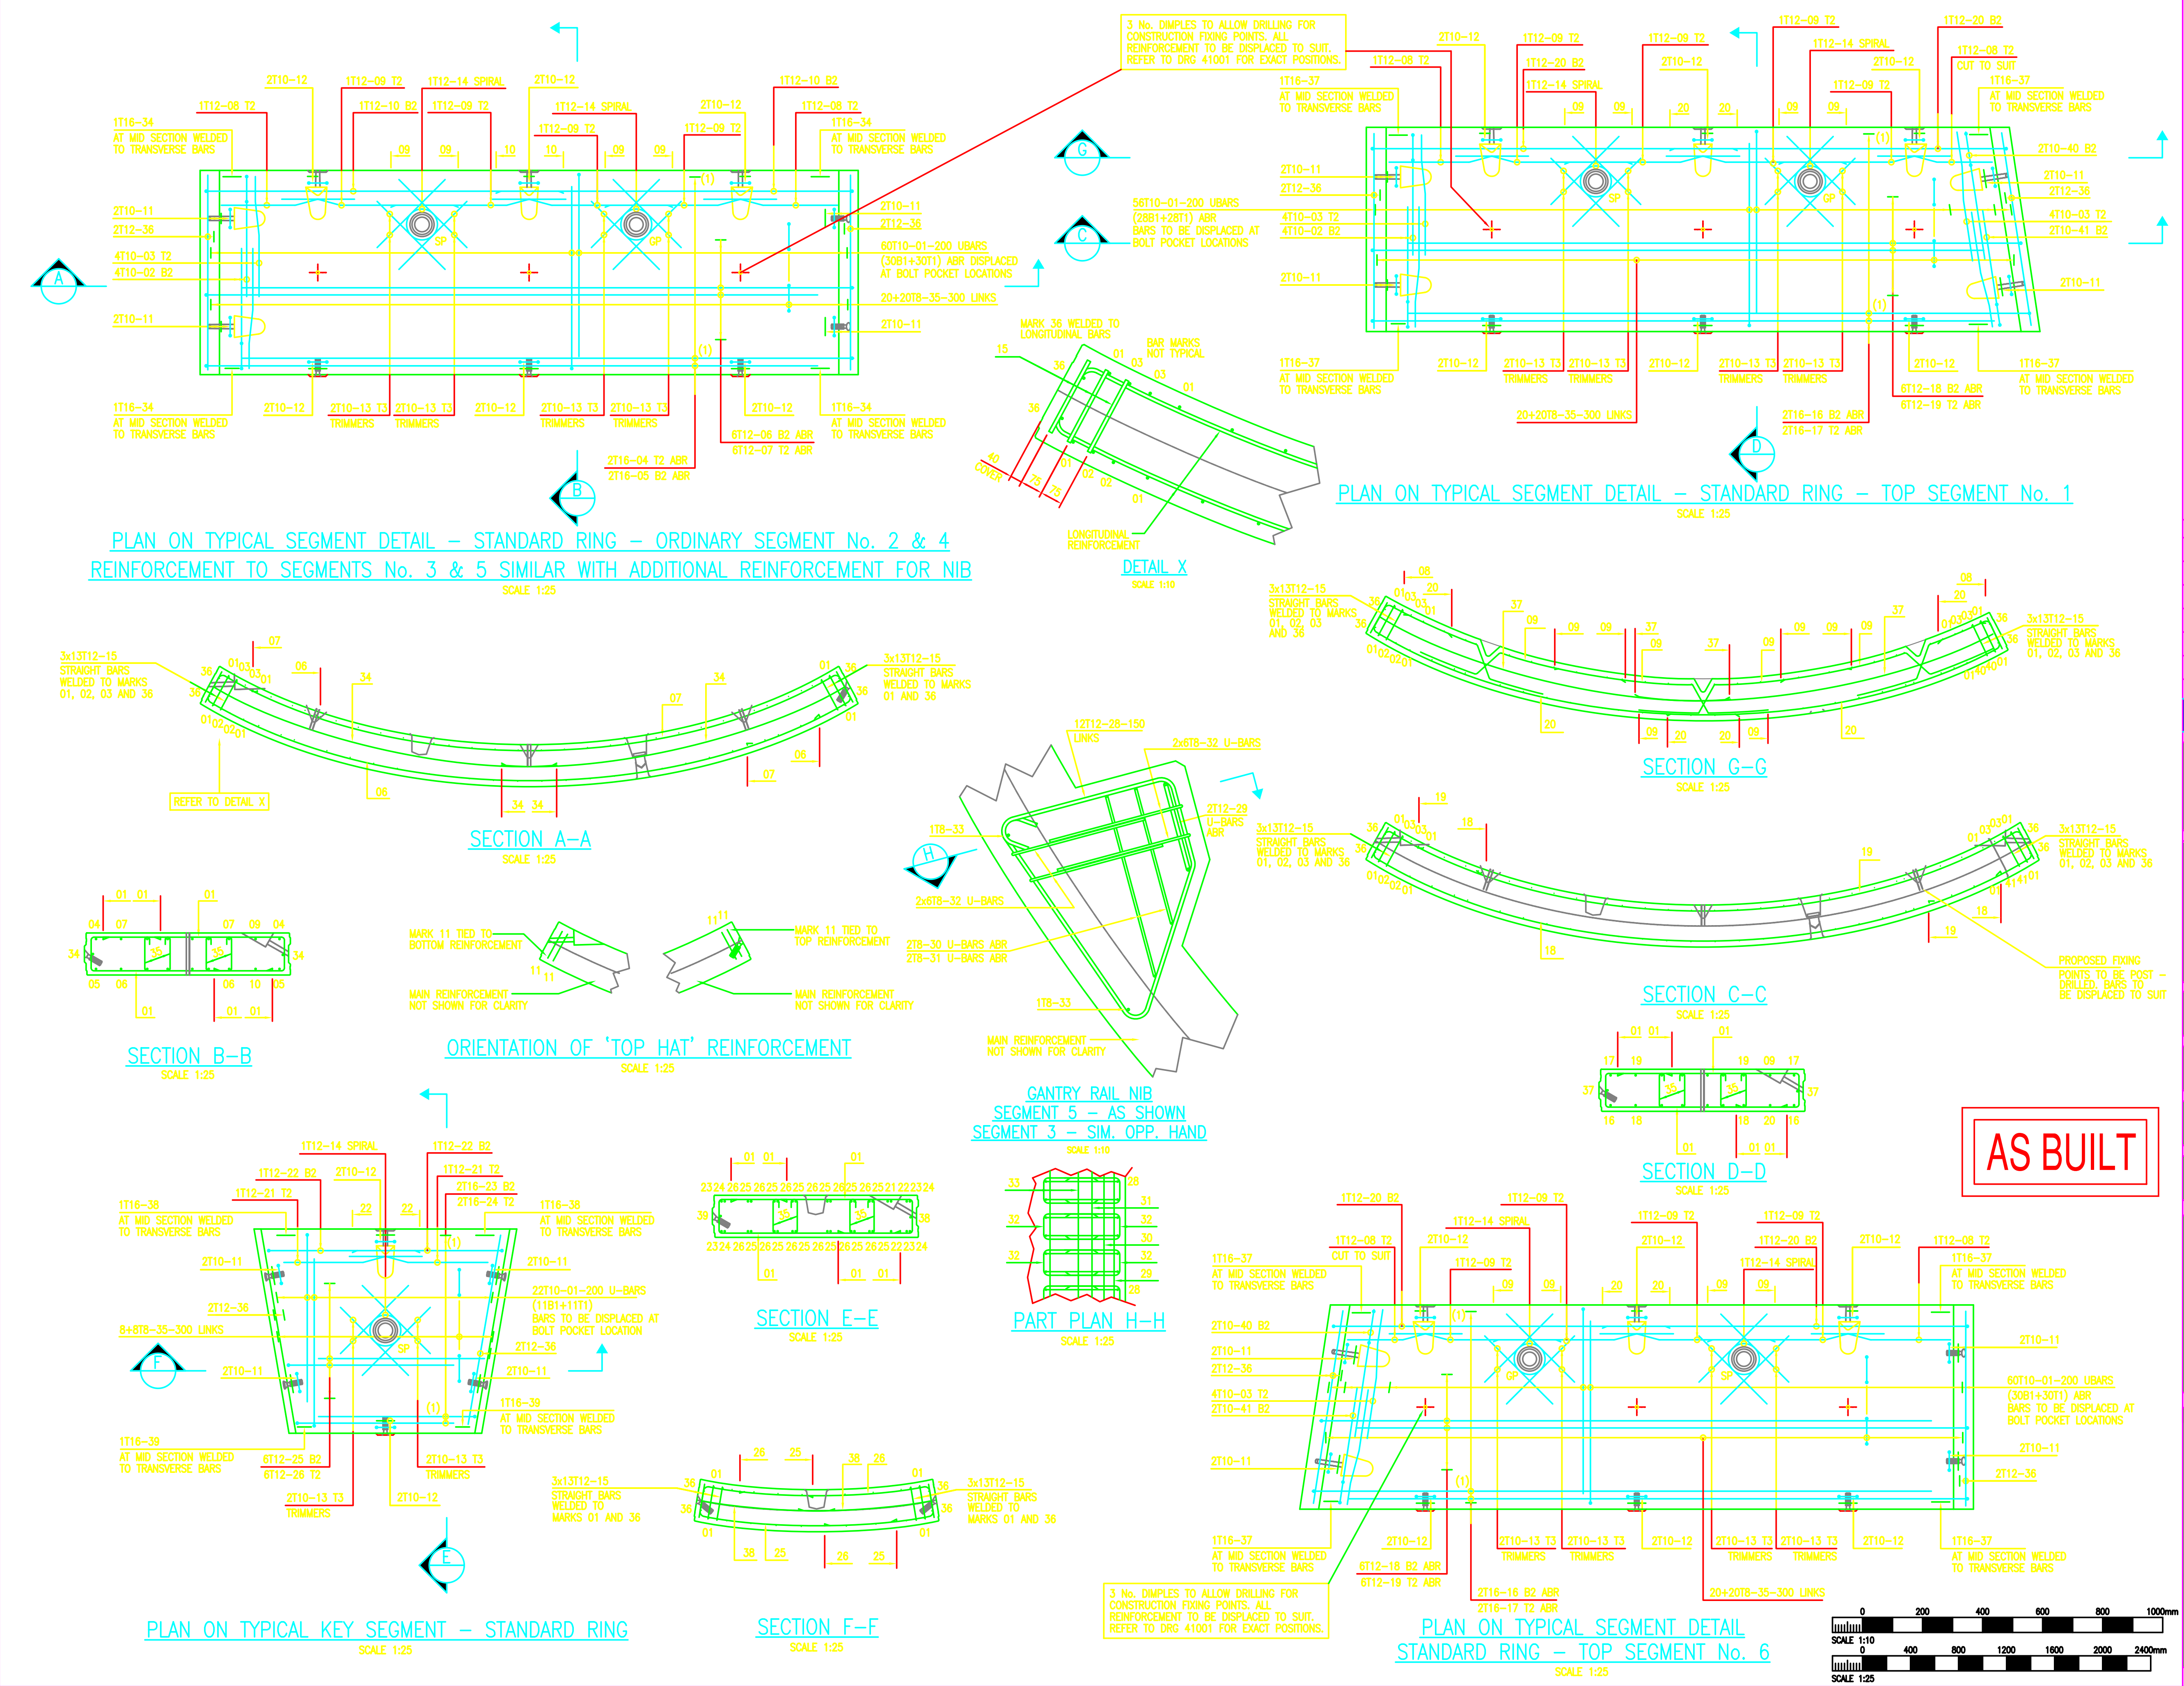
* Specified in multiples of 5mm. ** Specified in multiples of 25mm. (This schedule is based on BS 4466).



NOTES

1. ALL DIMENSIONS IN MILLIMETRES UNLESS NOTED OTHERWISE.
2. DO NOT SCALE THIS DRAWING. ONLY FIGURED DIMENSIONS ARE TO BE USED.
3. REFER TO GENERAL NOTES ON DWG No. 41001.
4. THIS DRAWING TO BE READ IN CONJUNCTION WITH DWG Nos. 41001, 41002, 41003, 41004 & 41012.
5. LAP LENGTHS:–
   T10 – 300mm T12 – 350mm T16 – 460mm
6. WELDS TO BE GRADE 50. MINIMUM AREA OF WELD TO BE 110mm2
7. ALL BARS TO BE GRADE 460 TYPE 2(T) U.N.O.
8. REINF'T DESIGNATIONS ARE AS BS.4466 : 1989
9. NOMINAL COVER 40mm. MINIMUM COVER 35mm
10. BAR LAYER NOTATIONS AS FOLLOWS:–
    B1 BOTTOM FACE OUTER LAYER
    B2 BOTTOM FACE SECOND LAYER
    T1 TOP FACE OUTER LAYER
    T2 TOP FACE SECOND LAYER
11. ABBREVIATIONS AS FOLLOWS:–
    ABR ALTERNATE BARS REVERSED
12. FOR REINFORCEMENT DETAILS REFER TO BAR BENDING SCHEDULE :– RS/HA/BT/C11/41513 SHEETS 1 TO 7.
13. THE ADEQUACY OF ALL REINFORCEMENT FOR LIFTING AND STIFFENING IS TO BE CONFIRMED BY THE CONTRACTOR

VEHICLE CROSS PASSAGES AND ELECTRICAL NICHES NOT INCLUDED IN SCHEDULE

AS BUILT

NOTES

1. NICHE AND CROSS PASSAGE LOCATIONS BASED ON DRAWINGS DR/CB/PRO/C01/74039/03/O, THRU. 74042 INCLUSIVE.
2. DETAILS OF CUT AND COVER WORKS WITHIN SHAFT WA2 INDICATIVE ONLY.
3. DRAWING TO BE READ IN CONJUNCTION WITH DRAWINGS DR/HA/BT/C11/41050 AND 41051 DR/HA/BT/C11/41121 – 41130
4. ACTUAL LOCATION OF CROSS PASSAGE AND NICHES TO SUIT AS BUILT SEGMENT LAYOUT AND POSITION OF PEDESTRIAN CROSS PASSAGES ±0.85m
5. FIRE FIGHTING AND EMERGENCY CALL NICHES TO OFFSET FROM CROSS PASSAGES BY APPROXIMATELY 5 TO 7m FROM THE CENTRE LINE OF CROSS PASSAGES TO SUIT DESIGN AND CONSTRUCTION CONSIDERATIONS.
6. FFN NOT ADJACENT TO CROSS PASSAGE SHOULD BE LOCATED BETWEEN THOSE WHICH ARE ADJACENT TO MAINTAIN THE REQUIRED OF NO MORE THAN 150 METRES.
7. THE SPACING OF PCP IS A MAXIMUM OF 250 METRES.
8. ECN, FFN, HRN, AND PCP LOCATIONS ARE BASED ON ROAD ALIGNMENT
9. THE LEVELS & TUNNEL GRADES (SOUTHBOUND) USED IN THIS DRAWING FOR REVISION 12 HAVE BEEN BASED ON 137W ALIGNMENT.

Project No. 4958
Design Package HWD 4.5

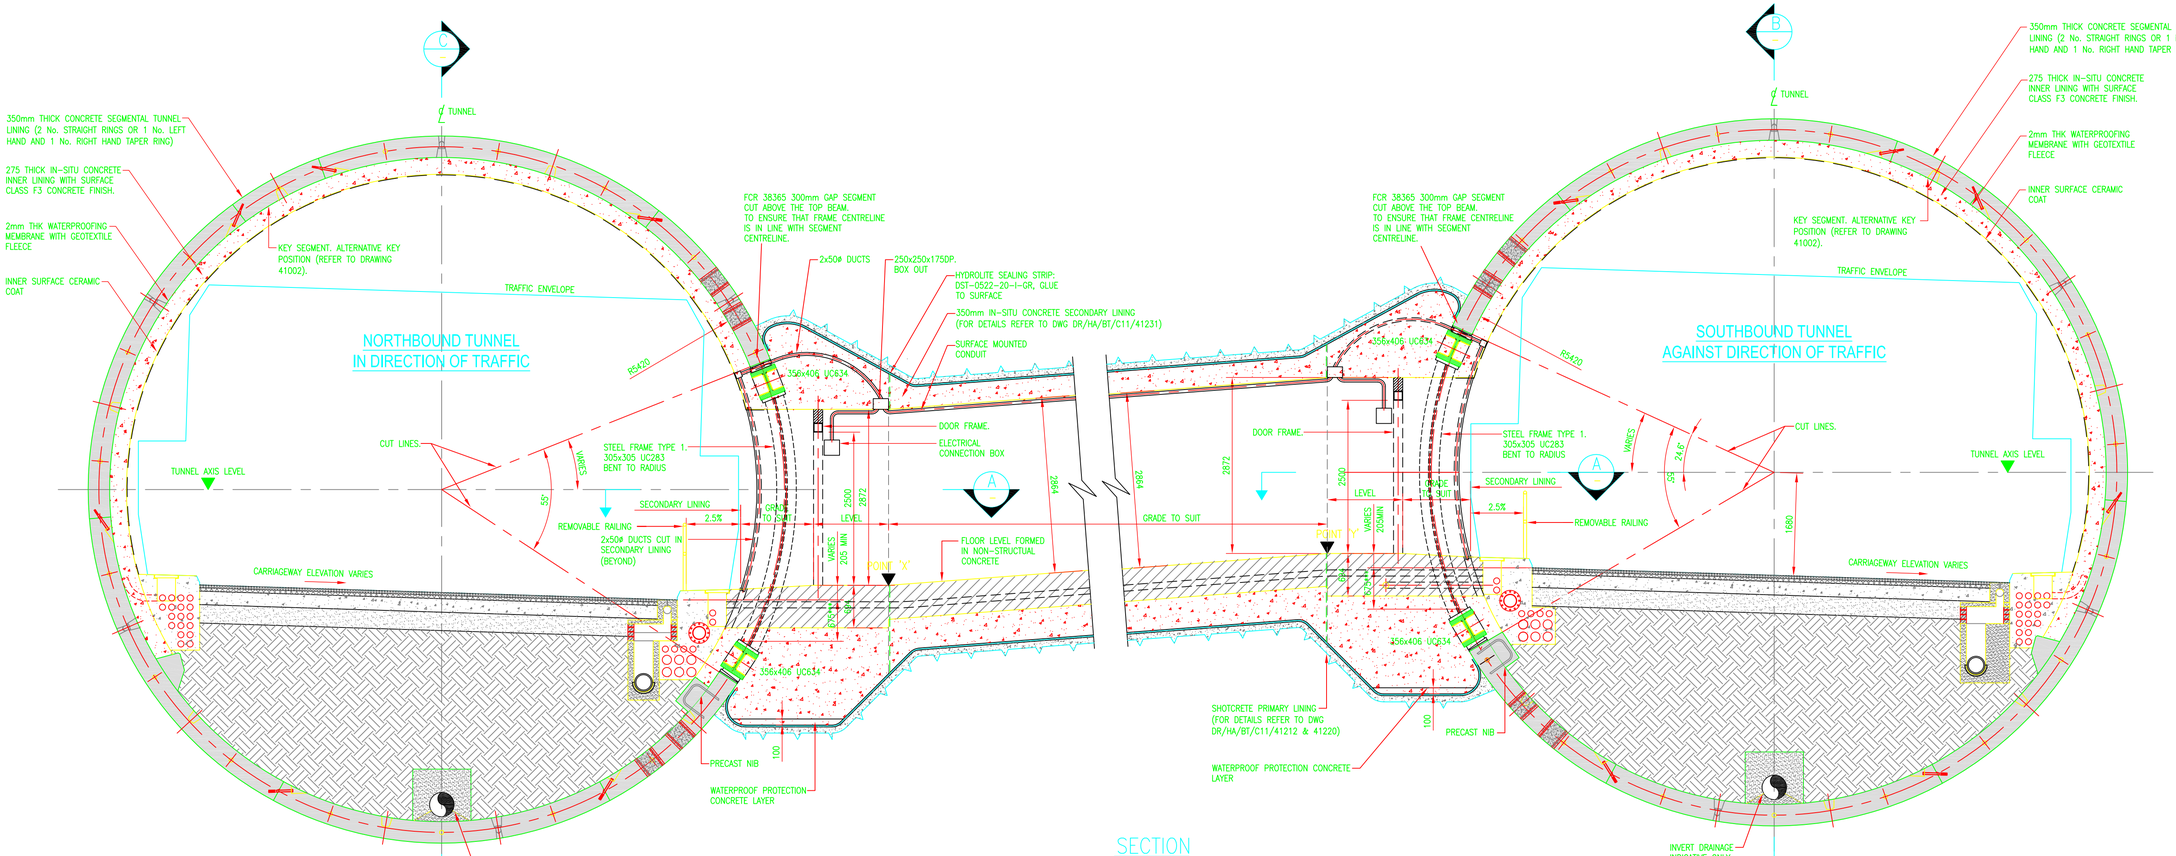
Drawing No. DR/HA/BT/C11/41056/12/X

Original Drawing Size : 594 x 841 – A1



NOTES:

1. THIS DRAWING TO BE READ IN CONJUNCTION WITH DR/HA/BT/C11/41121 – 41130 (INCLUSIVE) DR/HA/BT/C11/41052, 41060, 41131, & 41525 DR/HA/BT/C11/41232 & 41238.
2. ALL DIMENSIONS SHOWN ON THIS DRAWING ARE IN MILLIMETRES.
3. ALL STRUCTURAL STEEL TO BE GRADE S355.
4. IN-SITU SECONDARY CONCRETE COMPRESSIVE STRENGTH 40N/mm².
5. FOR DETAILS OF STEELWORK FRAME REFER TO DRAWING No DR/HA/BT/C11/41060.
6. CARRIAGEWAY SERVICES SHOWN AS INDICATIVE ONLY.
7. THE POSITION OF KEY SEGMENTS ARE OPPOSITE TO OPENING POSITIONS. UNLESS STATED IN NCR 39403.
8. FOR DETAILS OF REINFORCEMENT TO SECONDARY LINING REFER TO DRAWING DR/HA/BT/C11/41200 & 41207.

GII 2010 GROUND INVESTIGATION REPORT

REPORT ON SITE INVESTIGATION

AT

SWORDS ROAD

WHITEHALL

DUBLIN 9

Prepared by: EurGeol Fergal Mc Namara P.Geo.

Signed:…… **Date: 10th May, 2010.**

File No: 2442-02-10

Contents

1.0 Preamble

On the instructions of Colm Doyle of DBFL Consulting Engineers, a site investigation consisting of four no. rotary cored boreholes was carried out between 6th April and the 19th April 2010 on the above site.

2.0 Overview

2.1 Background

It is proposed to construct a new multi storey apartment development on the site.

2.2 Purpose and Scope

The purpose of the site investigation was to determine the depth to bedrock at the chosen locations and the nature and quality of the rock by means of rotary coring. The scope of the work undertaken for this study included the following:

- Visit project site to observe existing conditions
- Carrying out of the subsurface exploration programme consisting of 4 no. rotary cored boreholes.
- Detailed logs as per specification

3.0 Subsurface Exploration

3.1 General

Four number 100mm diameter rotary cored boreholes were proposed in positions designed to give a rock profile over the site in the vicinity of the port tunnel. Competent Bedrock was encountered at 25.50mBGL at the location of RC1, 22.00mBGL at the location of RC2, 21.00mBGL at the location of RC3 and 26.30mBGL at the location of RC4. The bedrock generally consisted of strong dark grey medium grained LIMESTONE with minor black calcareous MUDSTONE.

Recovery was generally 75% to 95% and the rock was slightly to moderately weathered. Poor recovery was encountered in RC2 of 15% due to weaker black calcareous mudstone in this area being washed away. Rotary cored borehole logs from the Dublin Port Tunnel site investigation were supplied to GII by the engineer for comparison. The nearest borehole to RC1 and RC4 is rotary cored borehole 262 which notes competent LIMESTONE bedrock at 26.00mBGL. Bedrock consists of

LIMESTONES with minor calcareous mudstone, this is consistent with the findings in this report from RC1 and RC4. The nearest boreholes to RC2 and RC3 are rotary cored boreholes 211 and 507 which note competent LIMESTONE bedrock at 20.00mBGL and 24.17mBGL respectively consisting of LIMESTONES with minor calcareous mudstones. This is consistent with the findings in this report from RC2 and RC3.

The locations of the exploratory holes are shown on the accompanying site plan.

Detailed logs of the boreholes can be found at the rear of this report.

Ground Investigations Ireland Ltd. present the results of the fieldworks and laboratory testing in accordance with the specification and related documents provided by or on behalf of the client The possibility of variation in the ground and/or groundwater conditions between or below exploratory locations or due to the investigation techniques employed must be taken into account when this report and the appendices inform designs or decisions where such variation may be considered relevant. Ground and/or groundwater conditions may vary due to seasonal, man-made or other activities not apparent during the fieldworks and no responsibility can be taken for such variation. The data presented and the recommendations included in this report and associated appendices are intended for the use of the client and the client's geotechnical representative only and any duty of care to others is excluded unless approved in writing.

CONTENTS

APPENDICES

1.0 Preamble

On the instructions of Aecom Consulting Engineers, a site investigation was carried out by Ground Investigations Ireland Ltd., between March and June 2020 at the site of the proposed residential development on Swords Road Whitehall, Dublin.

2.0 Overview

2.1. Background

It is proposed to construct a new residential development comprising seven multi story blocks of apartments and an eighth low level building housing a creche at the site including associated services, access roads and car parking. The site is currently brownfield with grass and low-level vegetation covering the majority of the site. The proposed construction is envisaged to consist of conventional or piled foundations and pavement make up with some local excavations for services and plant. A basement is proposed as part of the proposed scheme which will require excavation of approximately 4m BGL in parts of the site.

2.2. Purpose and Scope

The purpose of the site investigation was to investigate subsurface conditions utilising a variety of investigative methods in accordance with the project specification. The scope of the work undertaken for this project included the following:

- Visit project site to observe existing conditions
- Carry out 13 No. Trial Pits to a maximum depth of 4.5m BGL
- Carry out 3 No. Soakaways to determine a soil infiltration value to BRE digest 365
- Carry out 10 No. Cable Percussion boreholes to a maximum depth of 8m BGL
- Carry out 3 No. Rotary Geobore Follow on boreholes to a maximum depth of 37m BGL
- Installation of 3 No. Groundwater monitoring wells
- Geotechnical & Environmental Laboratory testing
- Factual Report

3.0 Subsurface Exploration

3.1. General

During the ground investigation a programme of intrusive investigation specified by the Consulting Engineer was undertaken to determine the sub surface conditions at the proposed site. Regular sampling and in-situ testing was undertaken in the exploratory holes to facilitate the geotechnical descriptions and to enable laboratory testing to be carried out on the soil samples recovered during excavation and drilling.
The procedures used in this site investigation are in accordance with Eurocode 7 Part 2: Ground Investigation and testing (ISEN 1997 – 2:2007) and B.S. 5930:2015.

3.2. Trial Pits

The trial pits were excavated using a 13T tracked excavator at the locations shown in the exploratory hole location plan in Appendix 1. The locations were checked using a CAT scan to minimise the potential for encountering services during the excavation. The trial pits were sampled, logged and photographed by a Geotechnical Engineer/Engineering Geologist prior to backfilling with arisings. Notes were made of any services, inclusions, pit stability, groundwater encountered and the characteristics of the strata encountered and are presented on the trial pit logs which are provided in Appendix 2 of this Report.

3.3. Soakaway Testing

The soakaway testing was carried out in selected trial pits at the locations shown in the exploratory hole location plan in Appendix 1. These pits were carefully excavated and filled with water to assess the infiltration characteristics of the proposed site. The pits were allowed to drain and the drop in water level was recorded over time as required by BRE Digest 365. The pits were logged prior to completing the soakaway test and were backfilled with arising's upon completion. The soakaway test results are provided in Appendix 3 of this Report.

3.4. Cable Percussion Boreholes

The Cable Percussion Boreholes were drilled using a Dando 2000 drilling rig with regular in-situ testing and sampling undertaken to facilitate the production of geotechnical logs and laboratory testing.
The standard method of boring in soil for site investigation is known as the Cable Percussion method. It consists of using a Shell in non cohesive soils and a clay cutter in cohesive soils, both operated on a wire cable. Very hard soils, boulders and other hard obstructions are broken up by chiselling and the fragments removed with the Shell. Where ground conditions made it necessary, the borehole was lined with 200mm diameter steel casing. While the use of the Cable Percussion method of boring gives the maximum data on soil conditions, some mixing of laminated soil is inevitable. For this reason, thin lenses of granular material may not be noticed. Disturbed samples were taken from the boring tools at suitable depths, so that there is a representative sample at the top of each change in stratum and thereafter at regular intervals down the borehole until the next stratum was encountered. The disturbed samples were then sealed and sent to the laboratory where they were visually examined to confirm the description of the relevant strata.
Standard Penetration Tests were carried out in the boreholes. The results of these tests, together with the depths at which the tests were taken are shown on the accompanying borehole records. The test consists of a thick wall sampler tube, 50mm external diameter, being driven into the soil by a monkey weighing 63.5kg and with a free drop of 760mm. For gravels and glacial till the driving shoe was replaced by a solid 60º cone. The Standard Penetration Test number referred to as the 'N' value is the number of blows required to drive the tube 300mm, after an initial penetration of 150mm. The number gives a guide to the consistency of the soil and can also be used to estimate the relative strength/density at the depth of the test and also to estimate the bearing capacity and compressibility of the soil. The cable percussion borehole logs are provided in Appendix 5 of this Report.

3.5. Rotary Boreholes

The rotary coring was carried out by a track mounted Comacchio Geo 405 rig at the locations shown on the location plan in Appendix 1. The rotary boreholes were completed from the ground surface or alternatively, where noted on the individual borehole log, from the base of the cable percussion borehole where a temporary liner was installed to facilitate follow-on rotary coring.

The Comacchio Geo 405 is equipped with rubber tracks which allow for short travel on pavement surfaces avoiding any damage to the surface. The Comacchio Geo 405 utilises a triple tube core barrel system operated using a wireline drilling process. The outer barrel is rotated by the drill rods and at its lower end, carries the coring bit. The inner barrel is mounted on a swivel so that it does not rotate during the process. The third barrel or liner is placed within the second one to retain the core intact and to preserve as much as possible the fabric of the drilling stratum. The core is cut by the coring bit and passes to the inner liner. The core is brought up to the surface within the inner barrel on a small diameter wire rope or line attached to the “overshoot” recovery tool which is then placed into a core box in order of recovery. A drilling fluid, typically air mist or water flush is passed from the surface through hollow drill rods to the drill bit, and is used to cool the drill bit. Temporary casing is used in some situations to support unstable ground or to seal off fissures or voids.

It should be noted that the rotary coring can only achieve limited recovery in overburden, particularly granular or weakly cemented strata due to the flushing medium washing away the cohesive fraction during coring. The recovery achieved, where required is noted on the borehole logs and core photographs are provided to allow assessment of the core recovered. The rotary borehole logs are provided in Appendix 5 of this Report.

3.6. Surveying

The exploratory hole locations have been recorded using a KQ GEO Technologies KQ-M8 System which records the coordinates and elevation of the locations to ITM or Irish National Grid as required by the project specification. The coordinates and elevations are provided on the exploratory hole logs in the appendices of this Report.

3.7. Groundwater/Gas Monitoring Installations

Groundwater and or Gas Monitoring Installation were installed upon the completion of the boreholes to enable sampling and the determination of the equilibrium groundwater level. The typical groundwater monitoring installation consists of a 50mm HDPE slotted pipe with a pea gravel response zone and bentonite seal installed to the Engineers specification. Where required the standpipe is sealed with a gas tap and finished with a durable steel cover fixed in place with a concrete surround. The installation details are provided on the exploratory hole logs in the appendices of this Report.

3.8. TRL Dynamic Cone Penetrometer

The TRL DCP tests were carried out at locations specified by the Consulting Engineer to determine a CBR design value for the design of external pavements. The testing was carried out below the Topsoil or existing pavement at the depths detailed on the test report. The test consists of dropping a 10kg weight on an anvil to drive a small diameter cone and recording the blows for a given penetration. The results of the DCP testing is included in Appendix 4 of this Report.

3.9. Laboratory Testing

Samples were selected from the exploratory holes for a range of geotechnical and environmental testing to assist in the classification of soils and to provide information for the proposed design.
Environmental & Chemical testing as required by the specification, including the Rilta Suite pH and sulphate testing was carried out by Element Materials Technology Laboratory in the UK. The Rilta suite testing includes both Solid Waste and Leachate Waste Acceptance Criteria.
Geotechnical testing consisting of moisture content, Atterberg limits, Particle Size Distribution (PSD), hydrometer and California Bearing Ratio (CBR) tests were carried out in NMTL's Geotechnical Laboratory in Carlow. Specialist shear strength testing consisting of quick undrained, consolidated undrained triaxial, carried out on undisturbed U100 samples cut from Geobore core.
Rock strength testing including Point Load (Is_{50}) and Unconfined Compressive Strength (UCS) testing was carried out in Pro Soils Geotechnical Laboratory in the UK.
The results of the laboratory testing are included in Appendix 6 of this Report.

4.0 Ground Conditions

4.1. General

The ground conditions encountered during the investigation are summarised below with reference to insitu and laboratory test results. The full details of the strata encountered during the ground investigation are provided in the exploratory hole logs included in the appendices of this report.

The sequence of strata encountered were consistent across the site and are generally comprised;

- Topsoil/Surfacing
- Made Ground
- Cohesive Deposits
- Bedrock

TOPSOIL: Topsoil was encountered in the majority of exploratory holes and was present to a maximum depth of 0.65m BGL.

MADE GROUND: Made Ground deposits were encountered beneath the Topsoil/Surfacing and were present to a depth of between 0.2m and 1.5m BGL. These deposits were described generally as *brown sandy slightly gravelly Clay with occasional cobbles or grey sandy angular Gravel.* In some pits *occasional*

fragments of concrete, red brick, wood, ceramic, metal and cloth were noted. TP05, TP05A and TP05B encountered a concrete slab at depths of between 0.90m and 1.20m BGL where the trial were terminated.

COHESIVE DEPOSITS: Cohesive deposits were encountered beneath the Made Ground and were described typically as *brown sandy gravelly CLAY with occasional cobbles and boulders* overlying a *stiff black sandy gravelly CLAY with occasional cobbles and boulders*. A second sequence of brown overlying black CLAY was also encountered at depth in BH05 and BH09 that were drilled to prove rock level. The secondary sand and gravel constituents varied across the site and with depth, with granular lenses occasionally present in the glacial till matrix. The strength of the cohesive deposits typically increased with depth and was firm to stiff becoming stiff or very stiff in the majority of the exploratory holes. These deposits had some or occasional cobble and boulder content where noted on the exploratory hole logs.

BEDROCK: Boreholes BH05 and BH09 recovered Medium strong to very strong grey/dark grey fine to medium grained laminated LIMESTONE interbedded with weak black fine grained laminated Mudstone. This is typical of the Calp Formation, which is noted on the geological mapping to the east of the proposed site.

The depth to rock varies from 22.0m BGL in BH05 to a maximum of 32.3m BGL in BH09. The total core recovery is good, typically 100%. The SCR and RQD both vary with some areas recovered as non-intact.

4.2. Groundwater

Groundwater strikes are noted on the exploratory hole logs where they occurred and where possible drilling was suspended for twenty minutes to allow the subsequent rise in groundwater to be recorded. We would point out that these exploratory holes did not remain open for sufficiently long periods of time to establish the hydrogeological regime and groundwater levels would be expected to vary with the tide, time of year, rainfall, nearby construction and other factors. For this reason, standpipes were installed in BH01, BH06 and BH10 to allow the equilibrium groundwater level to be determined. The groundwater monitoring is included in Appendix 7 of this Report.

4.3. Laboratory Testing

4.3.1. Geotechnical Laboratory Testing

The geotechnical testing carried out on soil samples recovered generally confirm the descriptions on the logs with the primary constituent of the cohesive deposits found to be a CLAY of low to intermediate plasticity. The Particle Size Distribution tests confirm that generally the cohesive deposits are well-graded with percentages of sands and gravels ranging between 8.9% and 43.9% generally with fines contents of 26.6 to 57.1%.

The CBR testing on remoulded samples gave results ranging between 0.1% and 14.3% for the cohesive deposits.

The results from all the completed laboratory testing including MCV and triaxial testing is included in Appendix 6 of this report.

4.3.1. Chemical Laboratory Testing

The pH and sulphate testing carried out indicate that pH results are near neutral and that the water soluble sulphate results is low when compared to the guideline values from BRE Special Digest 1:2005. The samples tested classify the soil as a Design Sulphate Level DS-1.

4.3.1. Environmental Laboratory Testing

A number of samples were analysed for a suite of parameters which allows for the assessment of the sampled material in terms of total pollutant content for classification of materials as *hazardous* or *non-hazardous*. The suite also allows for the assessment of the sampled material in terms of suitability for placement at licenced landfills (inert, stable non-reactive, hazardous etc.). The parameter list for the suite includes analysis of the solid samples for arsenic, barium, cadmium, chromium, copper, cyanide, lead, nickel, mercury, zinc, speciated aliphatic and aromatic petroleum hydrocarbons, pH, sulphate, sulphide, moisture content, soil organic matter and an asbestos screen.
The suite also includes those parameters specified in the EU Council Decision establishing criteria for the acceptance of waste at Landfills (Council Decision 2003/33/EC), which for the solid samples are total organic carbon (TOC), speciated aliphatic and aromatic petroleum hydrocarbons, BTEX, phenol, polychlorinated biphenyls (PCB) and PAH.
As part of the suite a leachate is generated from the solid sample which is analysed for antimony, arsenic, barium, cadmium, chromium, copper, lead, mercury, molybdenum, nickel, selenium, zinc, chloride, fluoride, soluble sulphate, sulphide, phenols, dissolved organic carbon (DOC) and total dissolved solids (TDS).
While the laboratory report provides a comparison with the waste acceptance criteria limits it does not provide a waste classification of the material sampled nor does it comment on any potentially hazardous properties of the materials tested. The possibility for contamination, not revealed by the testing undertaken should be borne in mind particularly where Made Ground deposits are present or the previous site use or location indicate a risk of environmental variation. A waste classification report is recommended to be carried out to provide an interpretation of the laboratory data should any material be required to be disposed of off site.

4.3.1. Rock Laboratory Testing

The rock testing carried out on samples recovered from the boreholes reported Unconfined Compressive Strength (UCS) values ranging between 36.9 and 105.2 MPa while the point load testing gave Is50 values ranging between 0.25 to 6.10 MPa.

The results from the completed laboratory testing is included in Appendix 6 of this report.

Attention :	Mike Sutton
Date :	30th March, 2020
Your reference :	9429-02-20
Our reference :	Test Report 20/3675 Batch 1
Location :	Whitehall, Swords Road Extension
Date samples received :	9th March, 2020
Status :	Final report
Issue :	1

Eight samples were received for analysis on 9th March, 2020 of which five were scheduled for analysis. Please find attached our Test Report which should be read with notes at the end of the report and should include all sections if reproduced. Interpretations and opinions are outside the scope of any accreditation, and all results relate only to samples supplied.
All analysis is carried out on as received samples and reported on a dry weight basis unless stated otherwise. Results are not surrogate corrected.

Note:

Asbestos Screen analysis is carried out in accordance with our documented in-house methods PM042 and TM065 and HSG 248 by Stereo and Polarised Light Microscopy using Dispersion Staining Techniques and is covered by our UKAS accreditation. Detailed Gravimetric Quantification and PCOM Fibre Analysis is carried out in accordance with our documented in-house methods PM042 and TM131 and HSG 248 using Stereo and Polarised Light Microscopy and Phase Contrast Optical Microscopy (PCOM). Samples are retained for not less than 6 months from the date of analysis unless specifically requested.

Opinions, including ACM type and Asbestos level less than 0.1%, lie outside the scope of our UKAS accreditation.

Where the sample is not taken by a Element Materials Technology consultant, Element Materials Technology cannot be responsible for inaccurate or unrepresentative sampling.

EMT Job No.	Batch	Sample ID	Depth	EMT Sample No.	Analysis	Reason
20/3675	1	TP01	2.4	1-3	VOC	Analysis taken from a previously sampled container.
20/3675	1	TP07	0.7	16-18	VOC	Analysis taken from a previously sampled container.

Please note that only samples that are deviating are mentioned in this report. If no samples are listed it is because none were deviating.

Only analyses which are accredited are recorded as deviating if set criteria are not met.

NOTES TO ACCOMPANY ALL SCHEDULES AND REPORTS

EMT Job No.: 20/3675

SOILS

Please note we are only MCERTS accredited (UK soils only) for sand, loam and clay and any other matrix is outside our scope of accreditation.

Where an MCERTS report has been requested, you will be notified within 48 hours of any samples that have been identified as being outside our MCERTS scope. As validation has been performed on clay, sand and loam, only samples that are predominantly these matrices, or combinations of them will be within our MCERTS scope. If samples are not one of a combination of the above matrices they will not be marked as MCERTS accredited.

It is assumed that you have taken representative samples on site and require analysis on a representative subsample. Stones will generally be included unless we are requested to remove them.

All samples will be discarded one month after the date of reporting, unless we are instructed to the contrary.

If you have not already done so, please send us a purchase order if this is required by your company.

Where appropriate please make sure that our detection limits are suitable for your needs, if they are not, please notify us immediately.

All analysis is reported on a dry weight basis unless stated otherwise. Limits of detection for analyses carried out on as received samples are not moisture content corrected. Results are not surrogate corrected. Samples are dried at 35°C ±5°C unless otherwise stated. Moisture content for CEN Leachate tests are dried at 105°C ±5°C.

Where Mineral Oil or Fats, Oils and Grease is quoted, this refers to Total Aliphatics C10-C40.

Where a CEN 10:1 ZERO Headspace VOC test has been carried out, a 10:1 ratio of water to wet (as received) soil has been used.

% Asbestos in Asbestos Containing Materials (ACMs) is determined by reference to HSG 264 The Survey Guide - Appendix 2 : ACMs in buildings listed in order of ease of fibre release.

Sufficient amount of sample must be received to carry out the testing specified. Where an insufficient amount of sample has been received the testing may not meet the requirements of our accredited methods, as such accreditation may be removed.

Negative Neutralization Potential (NP) values are obtained when the volume of NaOH (0.1N) titrated (pH 8.3) is greater than the volume of HCl (1N) to reduce the pH of the sample to 2.0 - 2.5. Any negative NP values are corrected to 0.

The calculation of Pyrite content assumes that all oxidisable sulphides present in the sample are pyrite. This may not be the case. The calculation may be an overesitimate when other sulphides such as Barite (Barium Sulphate) are present.

WATERS

Please note we are not a UK Drinking Water Inspectorate (DWI) Approved Laboratory .

ISO17025 accreditation applies to surface water and groundwater and usually one other matrix which is analysis specific, any other liquids are outside our scope of accreditation.

As surface waters require different sample preparation to groundwaters the laboratory must be informed of the water type when submitting samples.

Where Mineral Oil or Fats, Oils and Grease is quoted, this refers to Total Aliphatics C10-C40.

DEVIATING SAMPLES

All samples should be submitted to the laboratory in suitable containers with sufficient ice packs to sustain an appropriate temperature for the requested analysis. The temperature of sample receipt is recorded on the confirmation schedules in order that the client can make an informed decision as to whether testing should still be undertaken.

SURROGATES

Surrogate compounds are added during the preparation process to monitor recovery of analytes. However low recovery in soils is often due to peat, clay or other organic rich matrices. For waters this can be due to oxidants, surfactants, organic rich sediments or remediation fluids. Acceptable limits for most organic methods are 70 - 130% and for VOCs are 50 - 150%. When surrogate recoveries are outside the performance criteria but the associated AQC passes this is assumed to be due to matrix effect. Results are not surrogate corrected.

DILUTIONS

A dilution suffix indicates a dilution has been performed and the reported result takes this into account. No further calculation is required.

BLANKS

Where analytes have been found in the blank, the sample will be treated in accordance with our laboratory procedure for dealing with contaminated blanks.

NOTE

Data is only reported if the laboratory is confident that the data is a true reflection of the samples analysed. Data is only reported as accredited when all the requirements of our Quality System have been met. In certain circumstances where all the requirements of the Quality System have not been met, for instance if the associated AQC has failed, the reason is fully investigated and documented. The sample data is then evaluated alongside the other quality control checks performed during analysis to determine its suitability. Following this evaluation, provided the sample results have not been effected, the data is reported but accreditation is removed. It is a UKAS requirement for data not reported as accredited to be considered indicative only, but this does not mean the data is not valid.
Where possible, and if requested, samples will be re-extracted and a revised report issued with accredited results. Please do not hesitate to contact the laboratory if further details are required of the circumstances which have led to the removal of accreditation.

REPORTS FROM THE SOUTH AFRICA LABORATORY

Any method number not prefixed with SA has been undertaken in our UK laboratory unless reported as subcontracted.

Measurement Uncertainty

Measurement uncertainty defines the range of values that could reasonably be attributed to the measured quantity. This range of values has not been included within the reported results. Uncertainty expressed as a percentage can be provided upon request.

ABBREVIATIONS and ACRONYMS USED

#	ISO17025 (UKAS Ref No. 4225) accredited - UK.
SA	ISO17025 (SANAS Ref No.T0729) accredited - South Africa
B	Indicates analyte found in associated method blank.
DR	Dilution required.
M	MCERTS accredited.
NA	Not applicable
NAD	No Asbestos Detected.
ND	None Detected (usually refers to VOC and/SVOC TICs).
NDP	No Determination Possible
SS	Calibrated against a single substance
SV	Surrogate recovery outside performance criteria. This may be due to a matrix effect.
W	Results expressed on as received basis.
+	AQC failure, accreditation has been removed from this result, if appropriate, see 'Note' on previous page.
>>	Results above calibration range, the result should be considered the minimum value. The actual result could be significantly higher, this result is not accredited.
*	Analysis subcontracted to an Element Materials Technology approved laboratory.
AD	Samples are dried at 35°C ±5°C
CO	Suspected carry over
LOD/LOR	Limit of Detection (Limit of Reporting) in line with ISO 17025 and MCERTS
ME	Matrix Effect
NFD	No Fibres Detected
BS	AQC Sample
LB	Blank Sample
N	Client Sample
TB	Trip Blank Sample
OC	Outside Calibration Range

EMT Job No: 20/3675

Test Method No.	Description	Prep Method No. (if appropriate)	Description	ISO 17025 (UKAS/SANAS)	MCERTS (UK soils only)	Analysis done on As Received (AR) or Dried (AD)	Reported on dry weight basis
PM4	Gravimetric measurement of Natural Moisture Content and % Moisture Content at either 35°C or 105°C. Calculation based on ISO 11465 and BS1377.	PM0	No preparation is required.			AR	
TM4	Modified USEPA 8270 method for the solvent extraction and determination of PAHs by GC-MS.	PM8	End over end extraction of solid samples for organic analysis. The solvent mix varies depending on analysis required.			AR	Yes

Date :	22nd July, 2020
Your reference :	9429-02-20
Our reference :	Test Report 20/9186 Batch 1
Location :	Whitehall Swords Road
Date samples received :	14th July, 2020
Status :	Final report
Issue :	1

Ten samples were received for analysis on 14th July, 2020 of which ten were scheduled for analysis. Please find attached our Test Report which should be read with notes at the end of the report and should include all sections if reproduced. Interpretations and opinions are outside the scope of any accreditation, and all results relate only to samples supplied.
All analysis is carried out on as received samples and reported on a dry weight basis unless stated otherwise. Results are not surrogate corrected.

EMT Job No.	Batch	Sample ID	Depth	EMT Sample No.	Analysis	Reason
No deviating sample report results for job 20/9186						

Please note that only samples that are deviating are mentioned in this report. If no samples are listed it is because none were deviating.
Only analyses which are accredited are recorded as deviating if set criteria are not met.

NOTES TO ACCOMPANY ALL SCHEDULES AND REPORTS

EMT Job No.: 20/9186

SOILS

Please note we are only MCERTS accredited (UK soils only) for sand, loam and clay and any other matrix is outside our scope of accreditation.

Where an MCERTS report has been requested, you will be notified within 48 hours of any samples that have been identified as being outside our MCERTS scope. As validation has been performed on clay, sand and loam, only samples that are predominantly these matrices, or combinations of them will be within our MCERTS scope. If samples are not one of a combination of the above matrices they will not be marked as MCERTS accredited.

It is assumed that you have taken representative samples on site and require analysis on a representative subsample. Stones will generally be included unless we are requested to remove them.

All samples will be discarded one month after the date of reporting, unless we are instructed to the contrary.

If you have not already done so, please send us a purchase order if this is required by your company.

Where appropriate please make sure that our detection limits are suitable for your needs, if they are not, please notify us immediately.

All analysis is reported on a dry weight basis unless stated otherwise. Limits of detection for analyses carried out on as received samples are not moisture content corrected. Results are not surrogate corrected. Samples are dried at 35°C ±5°C unless otherwise stated. Moisture content for CEN Leachate tests are dried at 105°C ±5°C.

Where Mineral Oil or Fats, Oils and Grease is quoted, this refers to Total Aliphatics C10-C40.

Where a CEN 10:1 ZERO Headspace VOC test has been carried out, a 10:1 ratio of water to wet (as received) soil has been used.

% Asbestos in Asbestos Containing Materials (ACMs) is determined by reference to HSG 264 The Survey Guide - Appendix 2 : ACMs in buildings listed in order of ease of fibre release.

Sufficient amount of sample must be received to carry out the testing specified. Where an insufficient amount of sample has been received the testing may not meet the requirements of our accredited methods, as such accreditation may be removed.

Negative Neutralization Potential (NP) values are obtained when the volume of NaOH (0.1N) titrated (pH 8.3) is greater than the volume of HCl (1N) to reduce the pH of the sample to 2.0 - 2.5. Any negative NP values are corrected to 0.

The calculation of Pyrite content assumes that all oxidisable sulphides present in the sample are pyrite. This may not be the case. The calculation may be an overesitimate when other sulphides such as Barite (Barium Sulphate) are present.

WATERS

Please note we are not a UK Drinking Water Inspectorate (DWI) Approved Laboratory .

ISO17025 accreditation applies to surface water and groundwater and usually one other matrix which is analysis specific, any other liquids are outside our scope of accreditation.

As surface waters require different sample preparation to groundwaters the laboratory must be informed of the water type when submitting samples.

Where Mineral Oil or Fats, Oils and Grease is quoted, this refers to Total Aliphatics C10-C40.

DEVIATING SAMPLES

All samples should be submitted to the laboratory in suitable containers with sufficient ice packs to sustain an appropriate temperature for the requested analysis. The temperature of sample receipt is recorded on the confirmation schedules in order that the client can make an informed decision as to whether testing should still be undertaken.

SURROGATES

Surrogate compounds are added during the preparation process to monitor recovery of analytes. However low recovery in soils is often due to peat, clay or other organic rich matrices. For waters this can be due to oxidants, surfactants, organic rich sediments or remediation fluids. Acceptable limits for most organic methods are 70 - 130% and for VOCs are 50 - 150%. When surrogate recoveries are outside the performance criteria but the associated AQC passes this is assumed to be due to matrix effect. Results are not surrogate corrected.

DILUTIONS

A dilution suffix indicates a dilution has been performed and the reported result takes this into account. No further calculation is required.

BLANKS

Where analytes have been found in the blank, the sample will be treated in accordance with our laboratory procedure for dealing with contaminated blanks.

NOTE

Data is only reported if the laboratory is confident that the data is a true reflection of the samples analysed. Data is only reported as accredited when all the requirements of our Quality System have been met. In certain circumstances where all the requirements of the Quality System have not been met, for instance if the associated AQC has failed, the reason is fully investigated and documented. The sample data is then evaluated alongside the other quality control checks performed during analysis to determine its suitability. Following this evaluation, provided the sample results have not been effected, the data is reported but accreditation is removed. It is a UKAS requirement for data not reported as accredited to be considered indicative only, but this does not mean the data is not valid.
Where possible, and if requested, samples will be re-extracted and a revised report issued with accredited results. Please do not hesitate to contact the laboratory if further details are required of the circumstances which have led to the removal of accreditation.

REPORTS FROM THE SOUTH AFRICA LABORATORY

Any method number not prefixed with SA has been undertaken in our UK laboratory unless reported as subcontracted.

Measurement Uncertainty

Measurement uncertainty defines the range of values that could reasonably be attributed to the measured quantity. This range of values has not been included within the reported results. Uncertainty expressed as a percentage can be provided upon request.

ABBREVIATIONS and ACRONYMS USED

#	ISO17025 (UKAS Ref No. 4225) accredited - UK.
SA	ISO17025 (SANAS Ref No.T0729) accredited - South Africa
B	Indicates analyte found in associated method blank.
DR	Dilution required.
M	MCERTS accredited.
NA	Not applicable
NAD	No Asbestos Detected.
ND	None Detected (usually refers to VOC and/SVOC TICs).
NDP	No Determination Possible
SS	Calibrated against a single substance
SV	Surrogate recovery outside performance criteria. This may be due to a matrix effect.
W	Results expressed on as received basis.
+	AQC failure, accreditation has been removed from this result, if appropriate, see 'Note' on previous page.
>>	Results above calibration range, the result should be considered the minimum value. The actual result could be significantly higher, this result is not accredited.
*	Analysis subcontracted to an Element Materials Technology approved laboratory.
AD	Samples are dried at 35°C ±5°C
CO	Suspected carry over
LOD/LOR	Limit of Detection (Limit of Reporting) in line with ISO 17025 and MCERTS
ME	Matrix Effect
NFD	No Fibres Detected
BS	AQC Sample
LB	Blank Sample
N	Client Sample
TB	Trip Blank Sample
OC	Outside Calibration Range

For waters this can be due to oxidants, surfactants, organic rich sediments or remediation fluids. Acceptable limits for most organic methods are 70 - 130% and for VOCs are 50 - 150%. When surrogate recoveries are outside the performance criteria but the associated AQC passes this is assumed to be due to matrix effect. Results are not surrogate corrected.

DILUTIONS

A dilution suffix indicates a dilution has been performed and the reported result takes this into account. No further calculation is required.

BLANKS

Where analytes have been found in the blank, the sample will be treated in accordance with our laboratory procedure for dealing with contaminated blanks.

NOTE

Data is only reported if the laboratory is confident that the data is a true reflection of the samples analysed. Data is only reported as accredited when all the requirements of our Quality System have been met. In certain circumstances where all the requirements of the Quality System have not been met, for instance if the associated AQC has failed, the reason is fully investigated and documented. The sample data is then evaluated alongside the other quality control checks performed during analysis to determine its suitability. Following this evaluation, provided the sample results have not been effected, the data is reported but accreditation is removed. It is a UKAS requirement for data not reported as accredited to be considered indicative only, but this does not mean the data is not valid.
Where possible, and if requested, samples will be re-extracted and a revised report issued with accredited results. Please do not hesitate to contact the laboratory if further details are required of the circumstances which have led to the removal of accreditation.

REPORTS FROM THE SOUTH AFRICA LABORATORY

Any method number not prefixed with SA has been undertaken in our UK laboratory unless reported as subcontracted.

Measurement Uncertainty

Measurement uncertainty defines the range of values that could reasonably be attributed to the measured quantity. This range of values has not been included within the reported results. Uncertainty expressed as a percentage can be provided upon request.

ABBREVIATIONS and ACRONYMS USED

#	ISO17025 (UKAS Ref No. 4225) accredited - UK.
SA	ISO17025 (SANAS Ref No.T0729) accredited - South Africa
B	Indicates analyte found in associated method blank.
DR	Dilution required.
M	MCERTS accredited.
NA	Not applicable
NAD	No Asbestos Detected.
ND	None Detected (usually refers to VOC and/SVOC TICs).
NDP	No Determination Possible
SS	Calibrated against a single substance
SV	Surrogate recovery outside performance criteria. This may be due to a matrix effect.
W	Results expressed on as received basis.
+	AQC failure, accreditation has been removed from this result, if appropriate, see 'Note' on previous page.
>>	Results above calibration range, the result should be considered the minimum value. The actual result could be significantly higher, this result is not accredited.
*	Analysis subcontracted to an Element Materials Technology approved laboratory.
AD	Samples are dried at 35°C ±5°C
CO	Suspected carry over
LOD/LOR	Limit of Detection (Limit of Reporting) in line with ISO 17025 and MCERTS
ME	Matrix Effect
NFD	No Fibres Detected
BS	AQC Sample
LB	Blank Sample
N	Client Sample
TB	Trip Blank Sample
OC	Outside Calibration Range

EMT Job No: 20/9618

Test Method No.	Description	Prep Method No. (if appropriate)	Description	ISO 17025 (UKAS/SANAS)	MCERTS (UK soils only)	Analysis done on As Received (AR) or Dried (AD)	Reported on dry weight basis
TM38	Soluble Ion analysis using Discrete Analyser. Modified US EPA methods: Chloride 325.2 (1978), Sulphate 375.4 (Rev.2 1993), o-Phosphate 365.2 (Rev.2 1993), TON 353.1 (Rev.2 1993), Nitrite 354.1 (1971), Hex Cr 7196A (1992), NH4+ 350.1 (Rev.2 1993 (comparabl	PM20	Extraction of dried and ground or as received samples with deionised water in a 2:1 water to solid ratio using a reciprocal shaker for all analytes except hexavalent chromium. Extraction of as received sample using 10:1 ratio of 0.2M sodium hydroxide to soil for hexavalent chromium using a reciprocal shaker.	Yes		AD	Yes
TM73	Modified US EPA methods 150.1 (1982) and 9045D Rev. 4 - 2004) and BS1377-3:1990. Determination of pH by Metrohm automated probe analyser.	PM11	Extraction of as received solid samples using one part solid to 2.5 parts deionised water.	Yes		AR	No

Attention :	Mike Sutton
Date :	22nd July, 2020
Your reference :	9429-02-20
Our reference :	Test Report 20/9144 Batch 1
Location :	Whitehall, Swords, Road Extension
Date samples received :	14th July, 2020
Status :	Final report
Issue :	1

Three samples were received for analysis on 14th July, 2020 of which three were scheduled for analysis. Please find attached our Test Report which should be read with notes at the end of the report and should include all sections if reproduced. Interpretations and opinions are outside the scope of any accreditation, and all results relate only to samples supplied.
All analysis is carried out on as received samples and reported on a dry weight basis unless stated otherwise. Results are not surrogate corrected.

Surrogate Recovery 4-Bromofluorobenzene	108	105	108								<0	%	TM15/PM10

All solid results are expressed on a dry weight basis unless stated otherwise.

Client Name: Ground Investigations Ireland
Reference: 9429-02-20
Location: Whitehall, Swords, Road Extension
Contact: Mike Sutton

EMT Job No.	Batch	Sample ID	Depth	EMT Sample No.	Analysis	Reason
No deviating sample report results for job 20/9144						

Please note that only samples that are deviating are mentioned in this report. If no samples are listed it is because none were deviating.
Only analyses which are accredited are recorded as deviating if set criteria are not met.

NOTES TO ACCOMPANY ALL SCHEDULES AND REPORTS

EMT Job No.: 20/9144

SOILS

Please note we are only MCERTS accredited (UK soils only) for sand, loam and clay and any other matrix is outside our scope of accreditation.

Where an MCERTS report has been requested, you will be notified within 48 hours of any samples that have been identified as being outside our MCERTS scope. As validation has been performed on clay, sand and loam, only samples that are predominantly these matrices, or combinations of them will be within our MCERTS scope. If samples are not one of a combination of the above matrices they will not be marked as MCERTS accredited.

It is assumed that you have taken representative samples on site and require analysis on a representative subsample. Stones will generally be included unless we are requested to remove them.

All samples will be discarded one month after the date of reporting, unless we are instructed to the contrary.

If you have not already done so, please send us a purchase order if this is required by your company.

Where appropriate please make sure that our detection limits are suitable for your needs, if they are not, please notify us immediately.

All analysis is reported on a dry weight basis unless stated otherwise. Limits of detection for analyses carried out on as received samples are not moisture content corrected. Results are not surrogate corrected. Samples are dried at 35°C ±5°C unless otherwise stated. Moisture content for CEN Leachate tests are dried at 105°C ±5°C.

Where Mineral Oil or Fats, Oils and Grease is quoted, this refers to Total Aliphatics C10-C40.

Where a CEN 10:1 ZERO Headspace VOC test has been carried out, a 10:1 ratio of water to wet (as received) soil has been used.

% Asbestos in Asbestos Containing Materials (ACMs) is determined by reference to HSG 264 The Survey Guide - Appendix 2 : ACMs in buildings listed in order of ease of fibre release.

Sufficient amount of sample must be received to carry out the testing specified. Where an insufficient amount of sample has been received the testing may not meet the requirements of our accredited methods, as such accreditation may be removed.

Negative Neutralization Potential (NP) values are obtained when the volume of NaOH (0.1N) titrated (pH 8.3) is greater than the volume of HCl (1N) to reduce the pH of the sample to 2.0 - 2.5. Any negative NP values are corrected to 0.

The calculation of Pyrite content assumes that all oxidisable sulphides present in the sample are pyrite. This may not be the case. The calculation may be an overesitimate when other sulphides such as Barite (Barium Sulphate) are present.

WATERS

Please note we are not a UK Drinking Water Inspectorate (DWI) Approved Laboratory .

ISO17025 accreditation applies to surface water and groundwater and usually one other matrix which is analysis specific, any other liquids are outside our scope of accreditation.

As surface waters require different sample preparation to groundwaters the laboratory must be informed of the water type when submitting samples.

Where Mineral Oil or Fats, Oils and Grease is quoted, this refers to Total Aliphatics C10-C40.

DEVIATING SAMPLES

All samples should be submitted to the laboratory in suitable containers with sufficient ice packs to sustain an appropriate temperature for the requested analysis. The temperature of sample receipt is recorded on the confirmation schedules in order that the client can make an informed decision as to whether testing should still be undertaken.

SURROGATES

Surrogate compounds are added during the preparation process to monitor recovery of analytes. However low recovery in soils is often due to peat, clay or other organic rich matrices. For waters this can be due to oxidants, surfactants, organic rich sediments or remediation fluids. Acceptable limits for most organic methods are 70 - 130% and for VOCs are 50 - 150%. When surrogate recoveries are outside the performance criteria but the associated AQC passes this is assumed to be due to matrix effect. Results are not surrogate corrected.

DILUTIONS

A dilution suffix indicates a dilution has been performed and the reported result takes this into account. No further calculation is required.

BLANKS

Where analytes have been found in the blank, the sample will be treated in accordance with our laboratory procedure for dealing with contaminated blanks.

NOTE

Data is only reported if the laboratory is confident that the data is a true reflection of the samples analysed. Data is only reported as accredited when all the requirements of our Quality System have been met. In certain circumstances where all the requirements of the Quality System have not been met, for instance if the associated AQC has failed, the reason is fully investigated and documented. The sample data is then evaluated alongside the other quality control checks performed during analysis to determine its suitability. Following this evaluation, provided the sample results have not been effected, the data is reported but accreditation is removed. It is a UKAS requirement for data not reported as accredited to be considered indicative only, but this does not mean the data is not valid.
Where possible, and if requested, samples will be re-extracted and a revised report issued with accredited results. Please do not hesitate to contact the laboratory if further details are required of the circumstances which have led to the removal of accreditation.

REPORTS FROM THE SOUTH AFRICA LABORATORY

Any method number not prefixed with SA has been undertaken in our UK laboratory unless reported as subcontracted.

Measurement Uncertainty

Measurement uncertainty defines the range of values that could reasonably be attributed to the measured quantity. This range of values has not been included within the reported results. Uncertainty expressed as a percentage can be provided upon request.

ABBREVIATIONS and ACRONYMS USED

#	ISO17025 (UKAS Ref No. 4225) accredited - UK.
SA	ISO17025 (SANAS Ref No.T0729) accredited - South Africa
B	Indicates analyte found in associated method blank.
DR	Dilution required.
M	MCERTS accredited.
NA	Not applicable
NAD	No Asbestos Detected.
ND	None Detected (usually refers to VOC and/SVOC TICs).
NDP	No Determination Possible
SS	Calibrated against a single substance
SV	Surrogate recovery outside performance criteria. This may be due to a matrix effect.
W	Results expressed on as received basis.
+	AQC failure, accreditation has been removed from this result, if appropriate, see 'Note' on previous page.
>>	Results above calibration range, the result should be considered the minimum value. The actual result could be significantly higher, this result is not accredited.
*	Analysis subcontracted to an Element Materials Technology approved laboratory.
AD	Samples are dried at 35°C ±5°C
CO	Suspected carry over
LOD/LOR	Limit of Detection (Limit of Reporting) in line with ISO 17025 and MCERTS
ME	Matrix Effect
NFD	No Fibres Detected
BS	AQC Sample
LB	Blank Sample
N	Client Sample
TB	Trip Blank Sample
OC	Outside Calibration Range
